

Front-End Developer Requirements

Job Summary

We are looking for a skilled front-end developer with two years of experience to join our team. The ideal candidate should have expertise in modern JavaScript/TypeScript, popular frameworks, and libraries for front-end development, and a strong understanding of responsive design principles. A focus on code quality, collaborative development, and the ability to work in a dynamic environment is essential.

Core Skills and Qualifications

1. Programming Languages and Frameworks

- Proficiency in **ECMAScript** (JavaScript) and **TypeScript** for dynamic and type-safe web development.
- Solid experience with **React JS** for web applications and **React Native** for cross-platform mobile applications.
- Working knowledge of **Next.js** for server-side rendering and static site generation.
- Familiarity with **Redux** and **MOBX** for efficient state management in complex applications.

2. Styling and UI Frameworks

- Expertise in **Tailwind CSS** and **Sass** for crafting responsive, maintainable, and scalable stylesheets.
- Knowledge of **Bootstrap** for rapid UI development.
- Experience with **Chakra UI** and **Material UI** for building accessible, reusable, and modular component libraries.

3. Version Control and Collaboration

- Proficient in **GIT** for version control, branch management, and collaborative development workflows.

4. Testing and Code Quality

- Strong understanding of **Test-Driven Development (TDD)** principles to ensure code reliability and robustness.

- Experience writing unit, integration, and functional tests for front-end components.
5. **Data and Markup Languages**
- Familiarity with **XML** for data exchange formats, ideally in contexts involving front-end and back-end data integration.
-

Additional Requirements

- **Experience Level:** Minimum of 2 years of experience as a front-end developer or a related role.
- **Communication Skills:** Ability to effectively communicate with cross-functional teams and work collaboratively.
- **Problem-Solving:** Strong analytical skills to identify and resolve technical challenges.
- **Attention to Detail:** High level of accuracy and attention to detail when implementing UI components and working with styling frameworks.
- **Learning Agility:** Openness to learning new technologies, tools, and methodologies as the project demands.

Responsibilities

- Develop, test, and maintain responsive, high-performance web and mobile applications using React, React Native, and Next.js.
 - Collaborate with designers and back-end developers to translate UI/UX designs into interactive front-end components.
 - Implement responsive, accessible, and reusable UI components using frameworks such as Chakra UI, Material UI, and Tailwind CSS.
 - Ensure code quality through TDD, code reviews, and adherence to best practices in GIT.
 - Manage state in complex applications using Redux or MOBX as required.
 - Continuously optimize application performance and user experience across devices and browsers.
-

Preferred Qualities

- **Self-Motivated:** A proactive approach to problem-solving and team collaboration.
- **Adaptability:** Flexibility to work in fast-paced environments and adjust to evolving project needs.
